HACKING TOOLS

Even the best hacker's use tools, and the reason is very simple. Tools provide various advantages which allow a hacker to perform multiple tasks with just a couple of commands. Here we have listed down the best Windows 10 Hacking tools which are completely free.

NMAP

Nmap is a very strong port scanner which holds a lot of functions. Nmap is included in a lot of toolkits and hackers and cyber security professionals use the tool to get a better insight in targeted environments. The Nmap hacking tool can be used to footprint entire environments.

Wireshark

PCAP, Sniffing and more. Wireshark is a powerful GUI sniffer and network analyzer. This tool allows each hacker and cyber security professional to gain insight on what exactly is going on in the network. Hackers can use this tool to extract passwords from broken or unsecure communication protocols.

Security professionals and network engineers use the Wireshark tool to perform network troubleshooting. It is a very useful tool and I strongly urge you to download the tool and play with it if this tool is completely new to you.

Cain and Abel

The two brothers have a long history in computer hacking, but that does not mean that they are outdated. The Cain and Abel tool is still very useful as it is still being used as a multipurpose windows only hacking tool. This tool can be used to perform man in the middle attacks (MITM), capture network data, passwords and user names.

Security professionals use this tool to audit broken Windows environments.

Metasploit

Hacking, exploits, vulnerabilities – these are the keywords for Metasploit. Metasploit is a massive database / framework which is used by hackers and security professionals to attack or audit environments.

Metasploit holds thousands of exploit, payload and scanners which can be used to hack computers, web servers and other digital environments. Metasploit contains various backdoors which can be inserted at targeted environments. These backdoors will grant the security professional or hacker access to the infected device.

Aircrack-NG

WPA and WEP are protocols which are used by WIFI accesspoints, but these protocols are vulnerable and can be exploited. The Aircrack-ng is used by security professionals and hackers to audit or hack wifi passwords. Aircrack-NG uses dictionary or brute force attacks. This tool does run under Windows 10, but you can better use it via an Linux environment.

Nessus

This tool is identified as a automatic vulnerability scanner. Nessus holds thousands of codes which search for weak and exploitable environments. The tool is really a plug-and-play tool as it only needs an IP to start an audit. Security professionals use this tool to audit environments and hackers use this tool to identify weak environments so they can exploit it.

Nessus runs on Windows 10 but you can also install it on Linux.

THC Hydra

The THC Hydra tool is a famous one. THC Hydra can be installed on Windows environments, but it works the best on a Linux environment. THC Hydra is used by hackers

to perform fast password cracking attacks. The tool can communicate with various protocols like ftp, http, smtp, pop3 and so on.

THC Hydra uses dictionary lists, and if you do not have a collection already, then I strongly urge you to take a look at this page which holds hundreds of password recovery password lists.

Putty

Well, this is not a hacking tool. Sorry for that. Putty is one great client which can communicate over various protocols. You can use it to communicate over SSH or TELNET. This tool is used by security professionals and hackers to bypass security solutions and to access remote computers and devices.
